

FINA 7397
Investment and Portfolio Management Project
6 Credit Hours
Thursday, 6-9 pm, Spring 5 2022, Melcher Hall 120
Pre-requisite: FINA 7A10 (Valuation)

Instructor: Rob Shoss, MBA/JD
Email address: Robert.shoss@gmail.com
Phone number: 832-771-6367

Course Content

This course is designed to help students learn key concepts to invest in equities. It is purposely structured to be practical with lessons that should be applicable for decades. In the process of learning about equities, students will learn content that will be useful to better evaluate a business regardless of whether they pursue an investment career. Specifically, students will develop invaluable skills such as better understanding valuation, capital allocation decisions, ways to judge management's effectiveness and decision making...We will also be making the material topical as we will have ongoing, weekly discussions about current, important investment events and news, why it's important and what to do about it.

This course will offer you the opportunity to simulate working as a buy-side financial analyst with an investment company. Along those lines, this course is rife with opportunities to discuss current, relevant investment topics such as whether retail stocks are value opportunities or traps and how to manage money with today's ongoing geopolitical issues. Expectations are that students will be highly interested in learning about equities and are willing to work hard to accomplish that goal.

The course will provide you an opportunity to select stocks, construct an equity portfolio and manage a diversified "virtual investment fund". Specifically, topics to be addressed include the following: what drives stock prices, determining what investment style fits you, learning about quantitative tools and ways to objectively screen stock universes, valuing stocks, understanding behavioral finance and risk management, learning about previous stock market manias and panics, exploring macro vs. micro investing, evaluating capital allocation, identifying and judging competitive moats, evaluating management competency, learning about selling stocks and portfolio diversification, distinguishing between value and value traps, exploring international, small-cap and mid-cap stocks and evaluating different sectors such as consumer staples, consumer cyclicals, technology, health care and heavy cyclicals.

A unique aspect of this 6-hour course will be its experiential component. Students will simultaneously with learning the integral factors of being a buy-side equity analyst, benefit from creating, trading and managing a “virtual” portfolio. Thus, students will be taking theory from the class and expressing and applying it via Stock Trak, a website offering global portfolio simulation.

What are the teaching methods for the Virtual Investment Fund course?

This course includes considerable classroom discussion, debate and dialogue. Additionally, there will be power-point presentations. Students will have the opportunity to explore real-world situations, evaluate and debate current investment topics and stock controversies. Guest lecturers are also widely used to provide real-life expertise on important equity topics.

Who is the instructor?

Robert Shoss has over 20 years of investment experience as he worked as a senior portfolio manager for both AIM/Invesco and Twinhawk Capital, a global, long-short hedge fund. In addition, presently, he serves on three non-profit investment committees including chairing an investment committee with a \$200 million dollar endowment. Currently, he’s a private investor. Robert has a JD/MBA from UH and has taught Personal Financial Planning since 2014 and will teach a new course to be offered this spring, Macroeconomics and Investment Management.
